

## **AMENDMENTS TO THE CLAIMS:**

This listing will replace all prior versions and listings of claims in the application:

### **LISTING OF CLAIMS:**

1. (Currently amended) A device for the inhalation of medicaments in the form of dry powder stored in single dose blister strips comprising a base sheet and a cover sheet, which device[,] includes

a mouthpiece through which the powder is inhaled,

a part with a blister strip support surface wherein said surface includes

a cavity which accommodates the blister and

a strip storage compartment

wherein the blister strip support surface further includes an attachment point and strip guides and wherein the mouthpiece is openably connected to said part comprising the blister strip support surface ; and wherein the cavity and guides are located such that exposure of the powder may be effected by pulling away the cover sheet from the base sheet in a direction which lies in a plane perpendicular to the attachment point and directly away from said attachment point .

2. (Previously Presented) A device according to claim 1, wherein the mouthpiece is comprised of three parts whereby the first part locks in the second part and the second part locks in the third part, said first part being an external part of the mouthpiece, said second part being a cylinder with a wider base, whose top serves as an exit of the powder from the device and whose base locks to the top of the third part, said third part being a cylinder with a

wider top which contains a side hole as air entrance and whose base contains two holes which touch the blister when a blister strip is inserted into the device.

3. (Previously Presented) A device according to claim 1, wherein the mouthpiece contains a projection

6. (Canceled)

7. (Canceled)

8. (Canceled)

9. (Canceled)

10. (Previously Presented) A device according to claim 1, wherein the attachment point is a protrusion .

11. (Previously Presented) An inhalation device according to claim 2, wherein the second part comprises a base portion and contains within it a helical formation whose end at the base of said part is blocked in half by a surface; wherein the third part is divided in two chambers by an upright flat surface and wherein the top of the chamber which contains the air entrance hole is blocked by a surface.

12. (Previously Presented) An inhalation device according to claim 1, wherein the single dose blister strip is comprised of a base sheet which defines a blister that contains the powder and an attachment formation and a cover sheet which is air-tightly sealed to the base sheet in the area around the blister and can be detached from the base sheet.

13. (Previously Presented) An inhalation device according to claim 2, wherein the attachment point is adapted to cooperate with an attachment formation on said blister strip which is in the form of a hole.

14. (Canceled)

15. (Canceled)

16. (Previously Presented) A device according to claim 2 wherein the mouthpiece contains a projection

17. (Previously Presented) A device according to claim 2, wherein the attachment point is a protrusion .

18. (Currently Amended) A device according to claim 2, wherein the single dose blister strip is comprised of a base sheet which defines a blister that contains the powder and an attachment formation and a cover sheet which is air-tightly sealed to the base sheet in the area around the blister (~~18~~) and can be detached from the base sheet.

19. (Currently Amended) A device according to claim 3, wherein the single dose blister strip is comprised of a base sheet which defines a blister that contains the powder and an attachment formation and a cover sheet which is air-tightly sealed to the base sheet in the area around the blister (~~18~~) and can be detached from the base sheet.

20. (Previously Presented) A device according to claim 11, wherein the single dose blister strip is comprised of a base sheet which defines a blister that contains the powder and an attachment formation and a cover sheet which is air-tightly sealed to the base sheet in the area around the blister (18) and can be detached from the base sheet.
